

Project Initialization and Planning Phase

Date	15 March 2024
Team ID	XXXXXX
Project Title	Global AI Education Project
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Global AI Education Project aims to make AI education accessible, affordable, structured, and practical for students, teachers, and learners from regions with limited AI education opportunities.	
Objective	To provide a structured and accessible platform that helps learners understand AI concepts, develop practical skills, and access updated educational resources regardless of their location or technical background.
Scope	The project focuses on AI learning content, structured learning paths, practical activities, teacher resources, and accessible online learning support.
Students and teachers may face difficulty accessing quality AI education because resources can be expensive, scattered, difficult to understand, outdated, or unavailable in some regions.	
Description	AI education is developing rapidly, while learners have different technical backgrounds and levels of access to courses, instructors, infrastructure, and practical opportunities. A structured platform can organize learning resources and practical activities in a simpler way.
Impact	The proposed project can improve access to AI education, reduce confusion caused by scattered resources, support teachers with updated materials, and provide learners with practical skills for further education and careers.
Develop a global AI education platform that provides structured AI learning paths, understandable learning materials, practical activities, teacher resources, and accessible online learning opportunities.	
Approach	Identify learner and teacher needs, organize AI learning content, design learning paths, develop the platform, integrate practical learning resources, test usability, and improve the solution based on feedback.

Key Features	Structured AI learning paths; beginner-friendly explanations; practical exercises and activities; resources for teachers; support for different skill levels; searchable AI topics and resources; affordable and accessible online learning.

Resource Requirements

Resource Type	Description	Specification/Allocation
Standard student development setup; optional cloud resources when required.		
Computing Resources	Computing resources for development and testing.	Standard student laptop/desktop; cloud CPU resources if required.
Memory	RAM required for development and testing.	Minimum 8 GB RAM recommended.
Storage	Disk space for source code, development files, and project resources.	At least 20 GB available storage.
Python environment, web browser, and required development tools.		
Frameworks	Frameworks for the proposed web platform.	Flask or FastAPI; final framework to be finalized during implementation.
Libraries	Libraries for data processing and possible AI/ML components.	pandas, numpy, scikit-learn, and other libraries as required.
Development Environment	IDE and version control tools.	VS Code or Jupyter Notebook, Git, and GitHub.
To be finalized after dataset selection; source, size, and format will depend on selected features.		
Data	Source, size, format	e.g., Kaggle dataset, 10,000 images
