

Business Question and Visualization Report

Date	29 September 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	Global AI adoption in education
Maximum Marks	5 Marks

Visualization development refers to the process of creating graphical representations of data to facilitate understanding, analysis, and decision-making. The goal is to transform complex datasets into visual formats that are easy to interpret, enabling users to gain insights and make informed decisions. Visualization development involves selecting appropriate visual elements, designing layouts, and using interactive features to enhance the user experience. This process is commonly associated with data visualization tools and platforms, and it plays a crucial role in business intelligence, analytics, and reporting.

Business Questions and Visualisation

The process involves defining specific business questions to guide the creation of meaningful and actionable visualizations in Tableau. Well-framed questions help in identifying key metrics, selecting relevant data, and building visualisation that provide insights.

Business Questions and Visualisation

The following business questions are designed for the project “Global AI adoption in education”. Each question is matched with a Tableau visualisation from the project screenshots. The visualisations focus on school AI adoption, student AI usage, curriculum integration, internet penetration, country-level adoption, and government AI policy.

1. How has school AI adoption changed over the years?

Visualization: Line chart showing Schools AI Adoption Pct by Year.

Figure 0: Tableau visualisation

Observation: The line chart shows the year-wise movement in school AI adoption, with a strong rise through 2025 followed by a lower value in 2026.

2. How does AI adoption vary across different countries?

Visualization: World map showing average school AI adoption by country.

Figure 1: Tableau visualisation

Observation: The map compares country-level average school AI adoption and makes geographical differences easier to identify.

3. Is internet penetration associated with school AI adoption?

Visualization: Scatter plot comparing Internet Penetration Pct and Schools AI Adoption Pct.

Figure 2: Tableau visualisation

Observation: The scatter plot places countries according to internet penetration and school AI adoption, supporting comparison between the two measures.

4. What is the average level of school AI adoption in the dataset?

Visualization: KPI-style view displaying the average Schools AI Adoption value.

Figure 3: Tableau visualisation

Observation: The visual presents an overall average school AI adoption value of approximately 29.41, providing a quick summary KPI.

5. Does the presence of AI in the curriculum affect school AI adoption?

Visualization: Bar chart comparing Schools AI Adoption Pct for AI In Curriculum = Yes and No.

Figure 4: Tableau visualisation

Observation: The chart compares school AI adoption for institutions with and without AI in the curriculum.

6. How does student AI usage compare across countries?

Visualization: Column chart showing Student AI Usage Pct by country.

Figure 5: Tableau visualisation

Observation: The chart compares student AI usage percentages across the listed countries and highlights the small differences between country values.

7. What is the distribution of government AI policies across countries?

Visualization: Pie chart showing Government AI Policy distribution.

Figure 6: Tableau visualisation

Observation: The pie chart categorizes countries according to Active, Draft, and None government AI policy status.

8. What overall patterns can be identified from the Global AI adoption in education Tableau visuals?

Visualization: Overview of the complete set of Tableau visualisations used in the project.

Figure 7: Tableau visualisation

Observation: The overview brings together the project's major views so that trends, country comparisons, student usage, curriculum adoption, internet penetration, and policy status can be reviewed together.

Note: Minimum 8 business questions and visualisations are included.
